LAB REPORT
on

Artificial Intelligence LAB

Submitted by:

Prakhyati Bansal (1BM21CS136)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
Nov-2023 to Feb-2024

B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019

(Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled "Artificial Intelligence lab" carried out by **Prakhyati Bansal (1BM21CS136),** who is a bonafide student of **B. M. S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2023. The Lab report has been approved as it satisfies the academic requirements in respect of a **Artificial Intelligence lab (22CS5PCAIN)**work prescribed for the said degree.

Dr. K. Panimozhi
Assistant Professor
Department of CSE

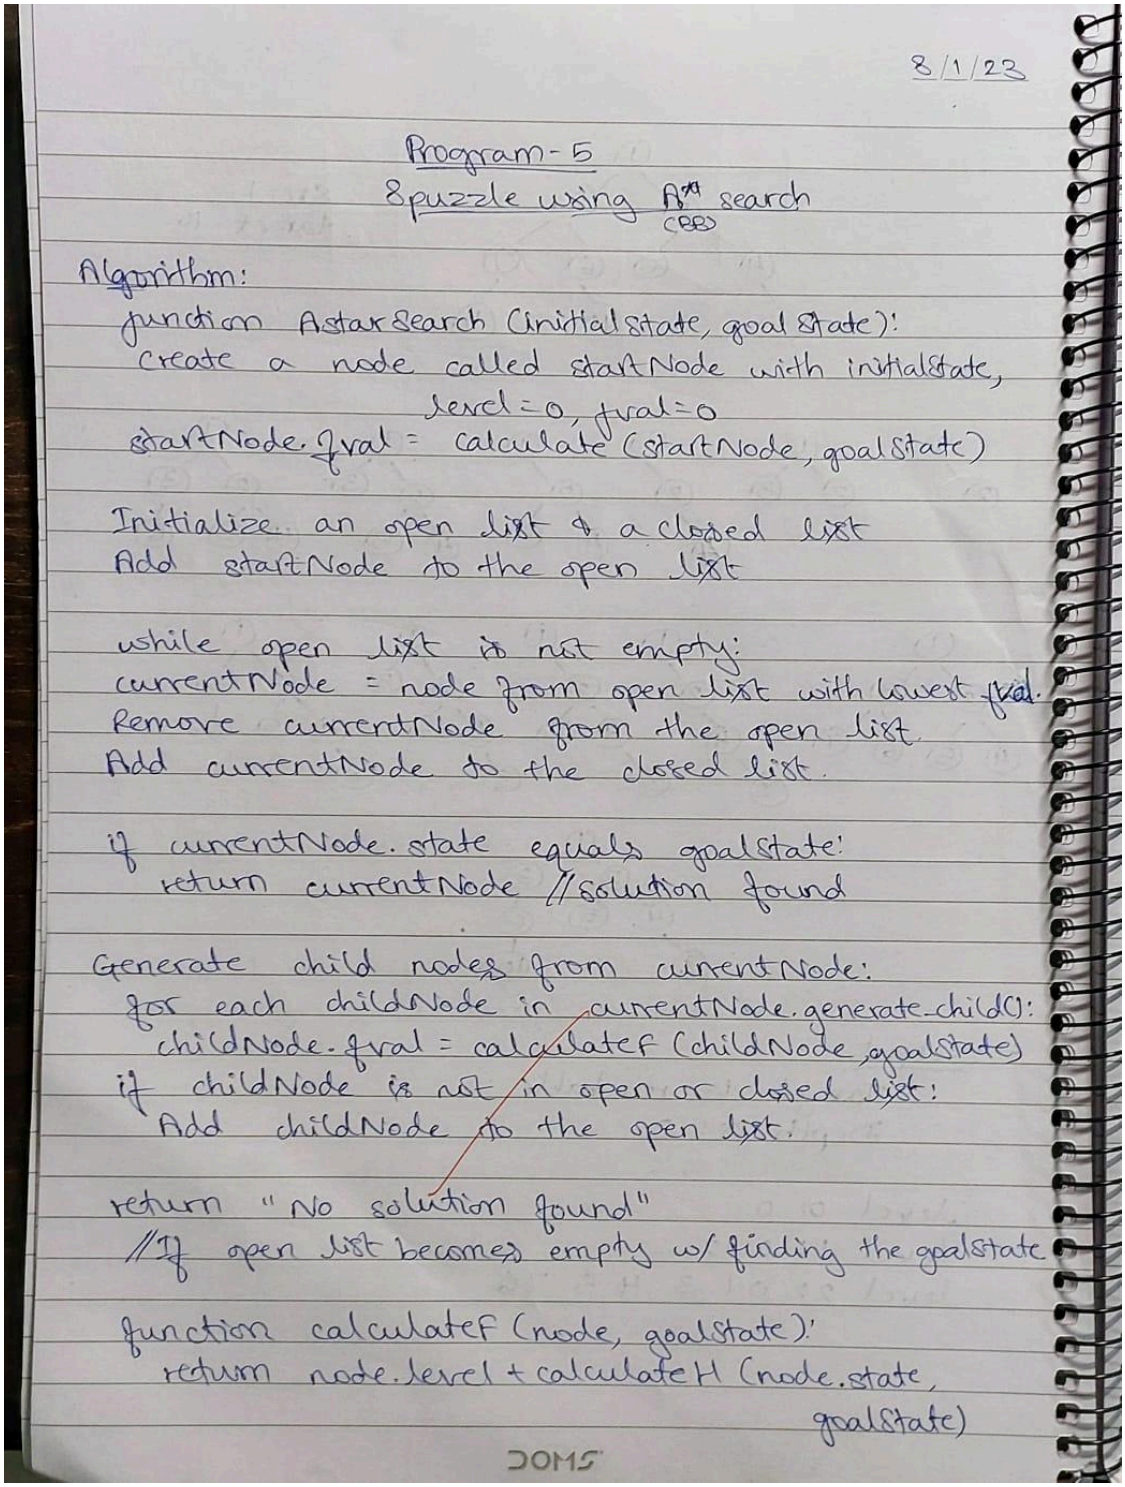
Program-5

Implement A* for 8 puzzle problem

Hand Written Notes:



8/1/23

Program-5

8puzzle using A* (888) search

Algorithm:

function AstarSearch (initialState, goalState):
create a node called startNode with initialState,
level = 0, fval = 0
startNode.fval = calculate (startNode, goalState)

Initialize an open list & a closed list
Add startNode to the open list

while open list is not empty:
currentNode = node from open list with lowest fval.
Remove currentNode from the open list.
Add currentNode to the closed list.

if currentNode.state equals goalState:
return currentNode //solution found

Generate child nodes from currentNode:
for each childNode in currentNode.generate_child():
childNode.fval = calculatef (childNode, goalState)
if childNode is not in open or closed list:
Add childNode to the open list.

return "No solution found"
//If open list becomes empty w/ finding the goalState

function calculatef (node, goalState):
return node.level + calculateH (node.state,
goalState)

DOMS

```
function calculateH(state, goalState):
    return node.level
//Heuristic function to estimate the cost from
                                state to goalState.
    h=0
    for each tile in state:
        if tile != '_':
        if tile is not at its goal position in goalState:
        h+=1
return h
```

Output:

enter start state of matrix:

```
1 2 3
5 6 _
7 8 4
```

enter goal state of matrix:

```
1 2 3
5 8 6
_ 7 4
```

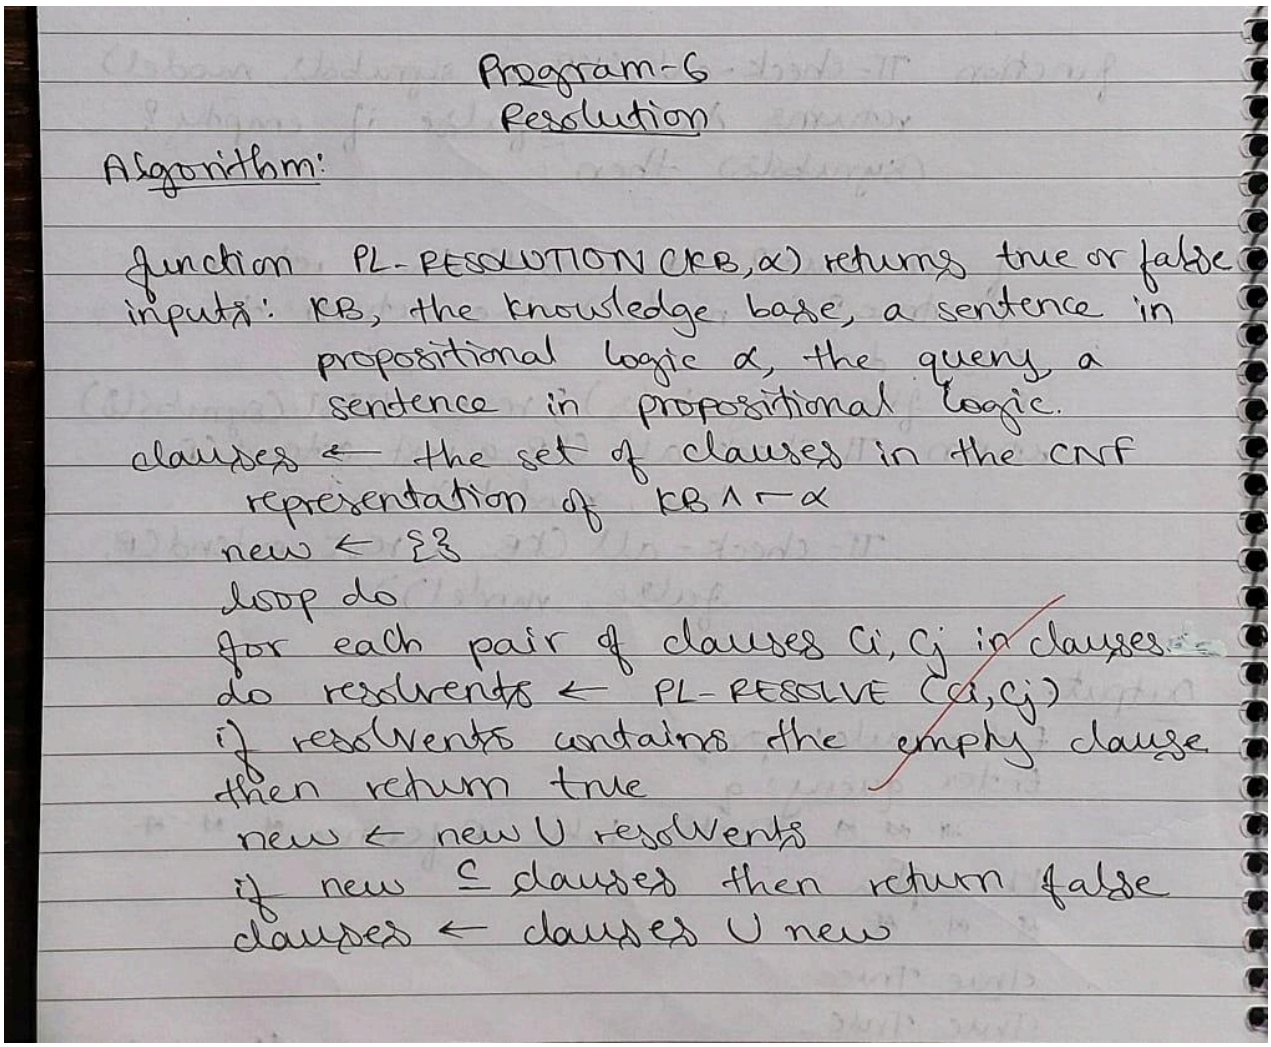
Program-7

Create a knowledge base using prepositional logic and prove the given query using resolution

Hand Written Notes:



Program-6
Resolution

Algorithm:

function PL-RESOLUTION(KB, α) returns true or false
inputs: KB, the knowledge base, a sentence in propositional logic α, the query, a sentence in propositional logic.
clauses ← the set of clauses in the CNF representation of KB ∧ ¬α
new ← {}
loop do
for each pair of clauses Ci, Cj in clauses do resolvents ← PL-RESOLVE(Ci, Cj)
if resolvents contains the empty clause then return true
new ← new ∪ resolvents
if new ⊆ clauses then return false
clauses ← clauses ∪ new

Output:

Enter the rule:

$p \wedge q \Rightarrow r$

$s \wedge t \Rightarrow q$

p, t, s

Enter query:

r

TRUE

Proof:

$p \wedge q \Rightarrow r$ is converted to CNF

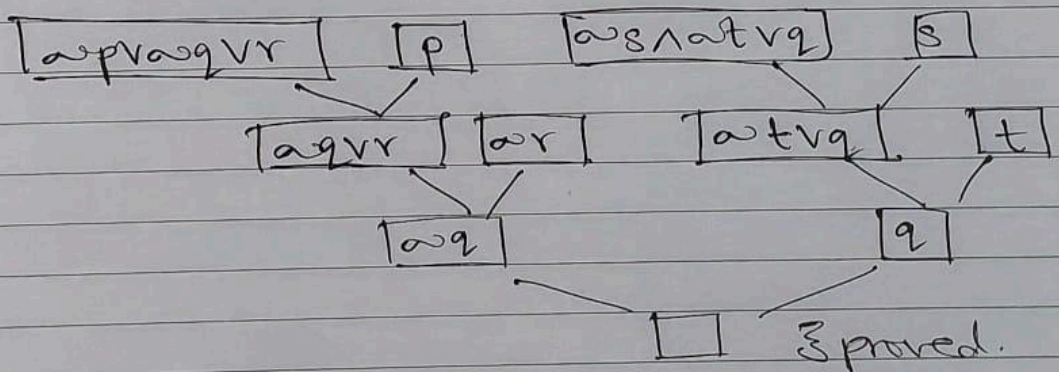
$\equiv \neg(p \wedge q) \vee r$

$\equiv \neg p \vee \neg q \vee r$

$s \wedge t \Rightarrow q$ is converted to CNF

$\equiv \neg(s \wedge t) \vee q$

$\equiv \neg s \wedge \neg t \vee q$



∴ proved.

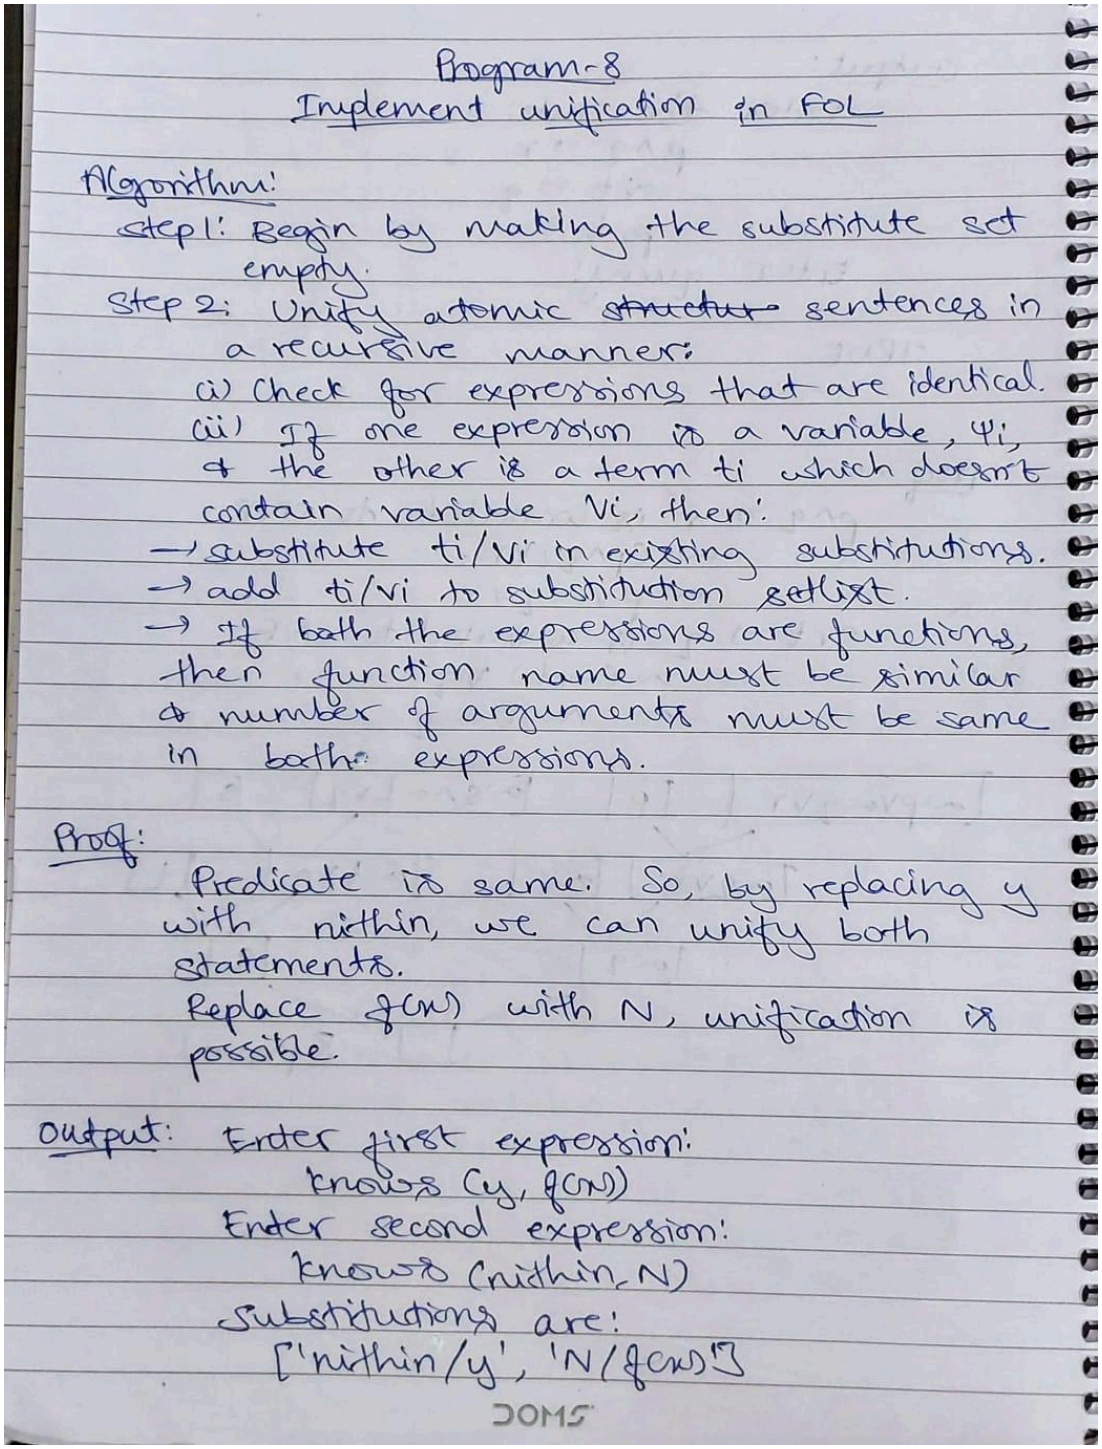
Program-8

Implement unification in first order logic

Hand Written Notes:



Program-8
Implement unification in FOL

Algorithm:
Step 1: Begin by making the substitute set empty.
Step 2: Unify atomic ~~structur~~ sentences in a recursive manner:
(i) Check for expressions that are identical.
(ii) If one expression is a variable, Vi, & the other is a term ti which doesn't contain variable Vi, then:
→ substitute ti/Vi in existing substitutions.
→ add ti/vi to substitution setlist.
→ If both the expressions are functions, then function name must be similar & number of arguments must be same in both expressions.

Proof:
Predicate is same. So, by replacing y with within, we can unify both statements.
Replace f(x) with N, unification is possible.

Output: Enter first expression:
knows (y, f(x))
Enter second expression:
knows (within, N)
Substitutions are:
['within/y', 'N/f(x)']

DOMS

Code:

```
import re

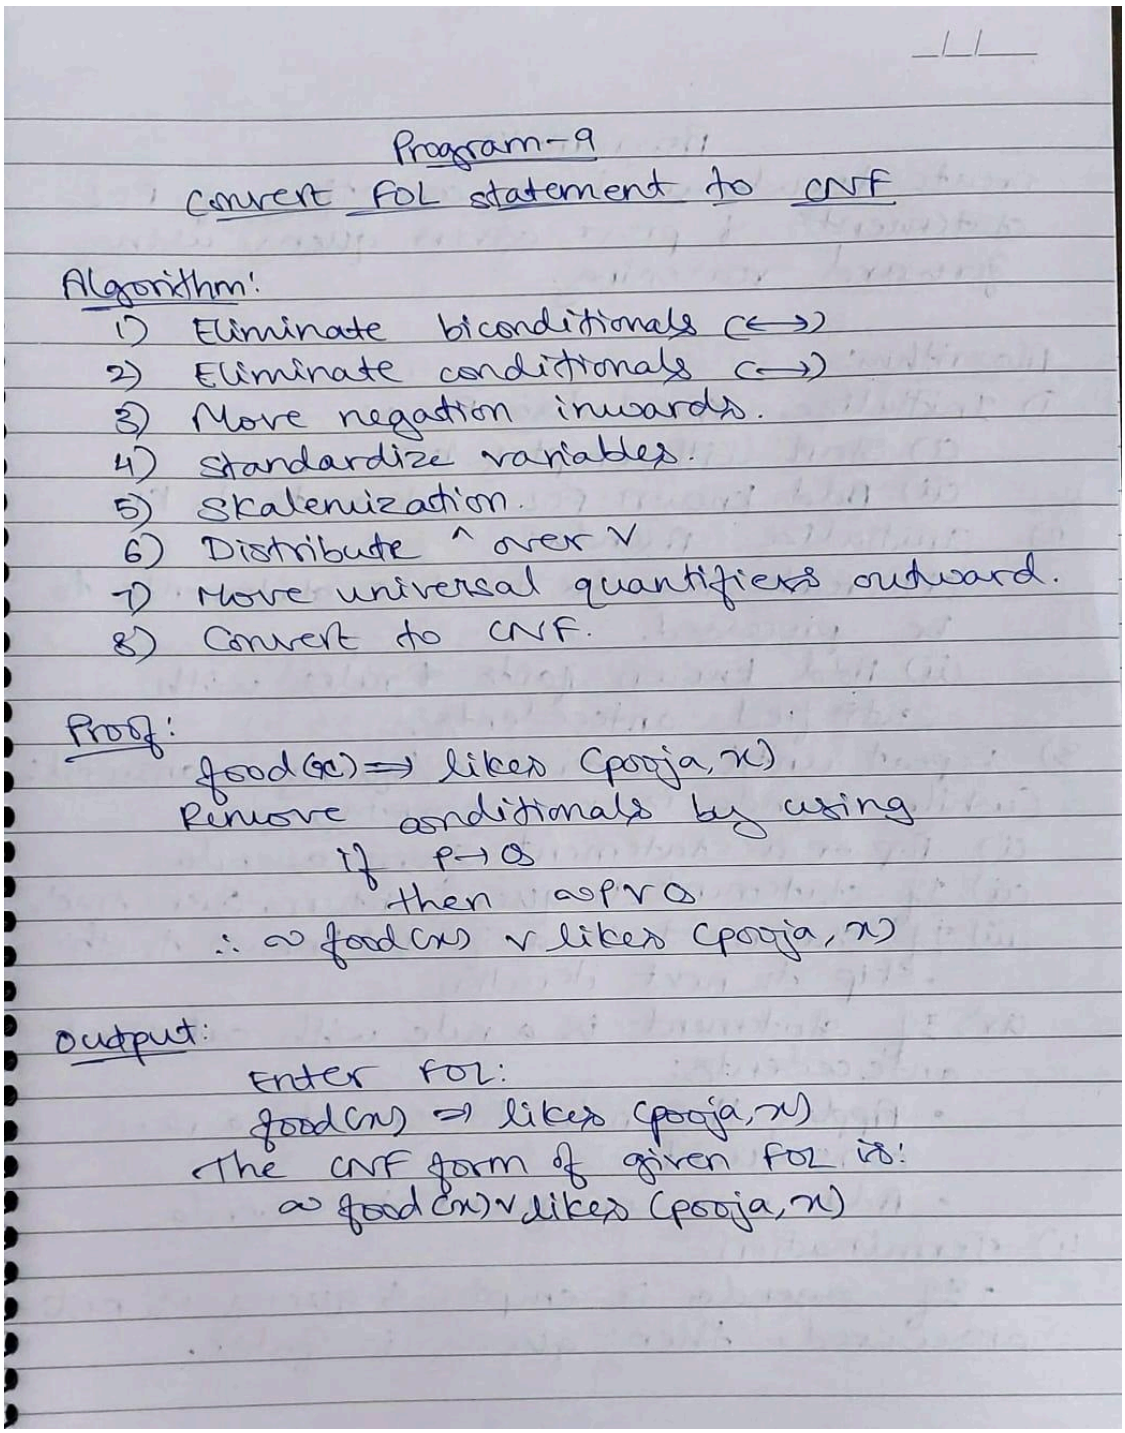
Program-9

Convert a given first order logic statement into Conjunctive Normal Form (CNF).

Hand Written Notes:



Program-9

Convert FOL statement to CNF

Algorithm:

1) Eliminate biconditionals ($\leftrightarrow$)
2) Eliminate conditionals ($\rightarrow$)
3) Move negation inwards.
4) Standardize variables.
5) Skolemization.
6) Distribute $\wedge$ over $\vee$
7) Move universal quantifiers outward.
8) Convert to CNF.

Proof:

$food(x) \Rightarrow likes(pooja, x)$

Remove conditionals by using

if $P \rightarrow Q$

then $\neg P \vee Q$

$\therefore \neg food(x) \vee likes(pooja, x)$

Output:

Enter FOL:

$food(x) \Rightarrow likes(pooja, x)$

The CNF form of given FOL is:

$\neg food(x) \vee likes(pooja, x)$

Code:

```
import re

```

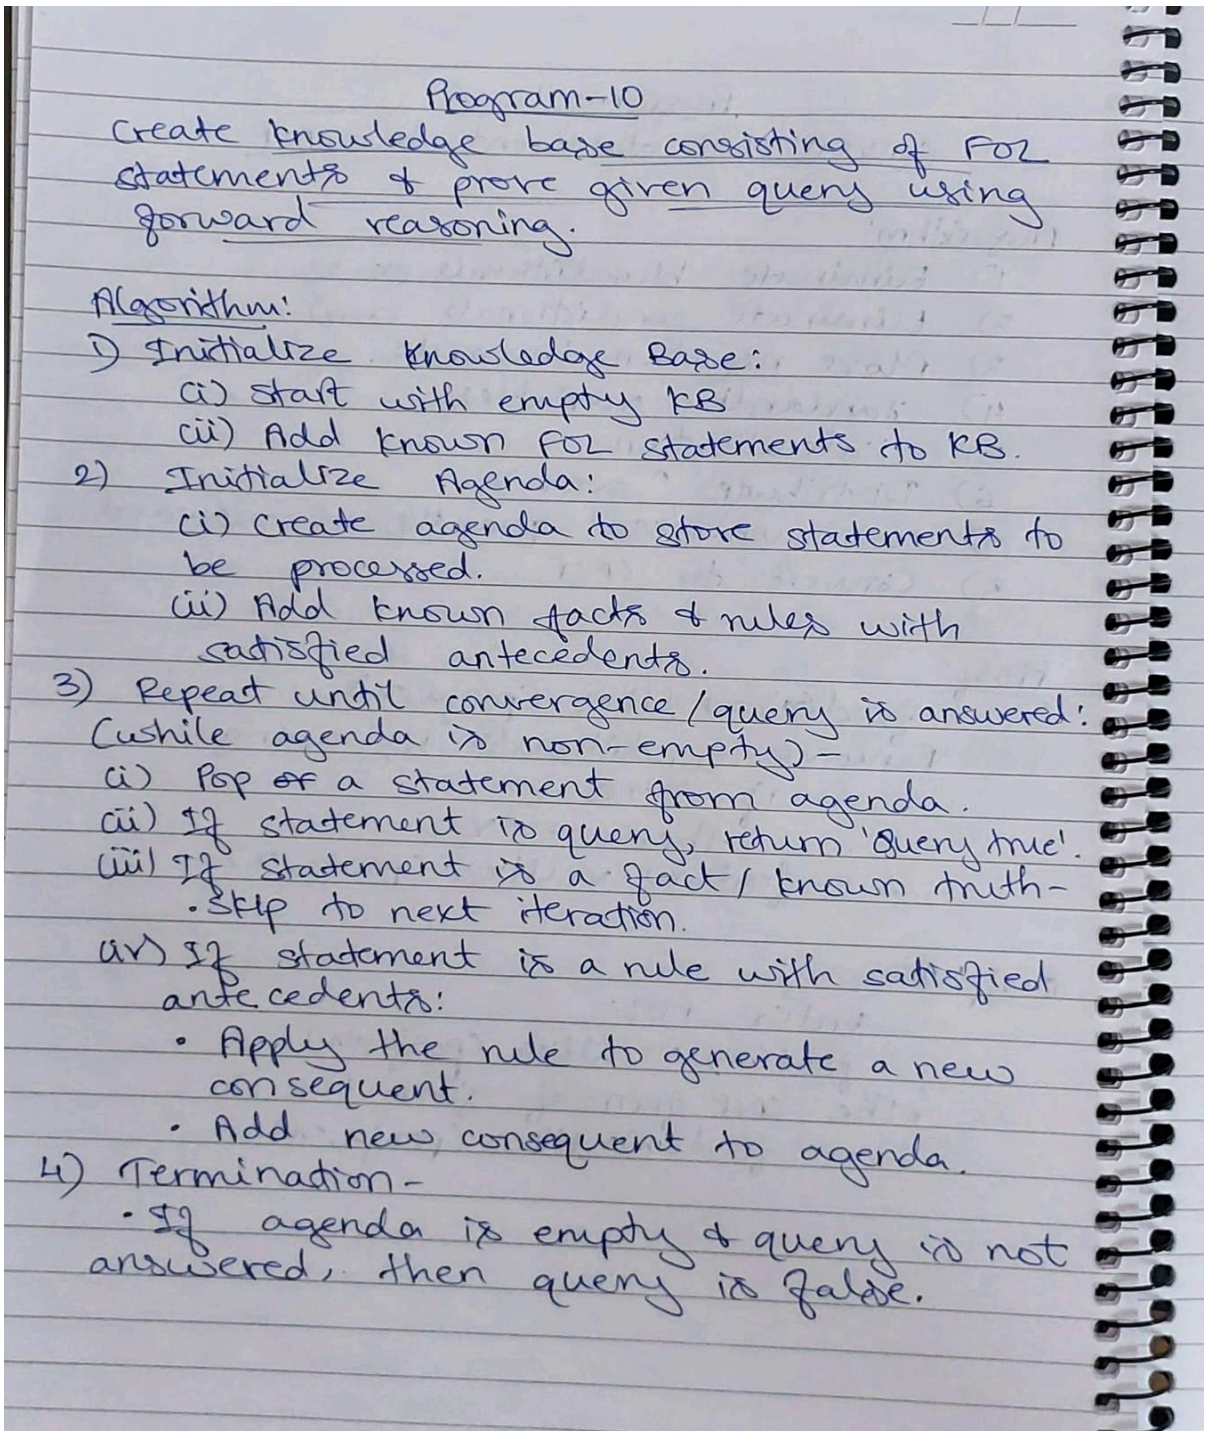
Program-10

Create a knowledge base consisting of first order logic statements and prove the given query using forward reasoning.

Hand Written Notes:



Program-10

Create knowledge base consisting of FOL statements & prove given query using forward reasoning.

Algorithm:

1) Initialize Knowledge Base:
   (i) Start with empty KB
   (ii) Add known FOL statements to KB.
2) Initialize Agenda:
   (i) Create agenda to store statements to be processed.
   (ii) Add known facts & rules with satisfied antecedents.
3) Repeat until convergence / query is answered: (while agenda is non-empty) -
   (i) Pop a statement from agenda.
   (ii) If statement is query, return 'query true'.
   (iii) If statement is a fact / known truth -
   • Skip to next iteration.
   (iv) If statement is a rule with satisfied antecedents:
   • Apply the rule to generate a new consequent.
   • Add new consequent to agenda.
4) Termination -
   • If agenda is empty & query is not answered, then query is false.

Prof:

agenda:

(i) missile (m1)

(ii) enemy (china, america)

iterations:

1) pop: missile (m1) (fact, skip)

pop: enemy (china, america) (fact, skip)

2) pop: missile (x) ⇒ weapon (x)

(Rule, add weapon (m1) to agenda)

3) pop: weapon (m1) (fact, skip)

4) pop: owns (china, m1) (fact, skip)

5) pop: missile (x) & owns (china, x) ⇒ sells (west, x, china)

(Rule, add sells (west, m1, china) to agenda)

6) pop: sells (west, m1, china) (fact, skip)

7) pop: american (west) (fact, skip)

8) pop: american (x) & weapon (y) & sells (x, y, z) & hostile (z) ⇒ criminal (x)

(Rule, add criminal (west) to agenda)

9) pop: criminal (west) (Query found return 'Query is true')

Output:

Enter KB (enter e to exit)

missile (x) ⇒ weapon (x)

missile (m1)

enemy (x, america) ⇒ hostile (x)

american (west)

enemy (china, america)

owns (china, m1)
